
Marine Conservation App MVP

7/12/2023

Intro

- **Our Client**

University of Bristol Underwater Club

- **The Project**

A Marine Conservation App

- **Outline**

User Stories, Stack, Demo

User Stories

Divers

As a **diver** I want to help **collect data about marine species** so that I can **support marine conservation**

User Stories

Marine Biologists

As a **marine biologist** I want to be able to **access the data** so that I can use it to **support my research in marine conservation**

User Stories

Client

As a **client** I want to support the **collection of data of marine species** so that a wider audience can **access, use and supply data** to create **awareness about marine conservation**.

User Stories

Public User

As a **public user** I would like to **learn about marine species** so that I can raise my own and others **awareness about marine conservation**

Screenshots

The screenshot shows a mobile application interface for a 'Settings' page. At the top, there is a hamburger menu icon and the title 'Settings'. Below this, the user is identified as 'admin'. The settings list includes 'View Website' with an external link icon, 'Privacy Policy' with a document icon, and 'Change Password' with a lock icon. The 'Change Password' section contains two text input fields: the first is labeled 'Password' and the second is labeled 'Confirm Password'. Both fields have a red error message below them that reads 'This field may not be blank.' At the bottom of this section is a blue button labeled 'Change Password'. Below the password fields is a 'Delete Account' option with a trash can icon.

Client Feedback

→ Dashboard

Dashboard is looking bare. Would like to see maybe navigation buttons and a how-to guide.

→ Maps

Have a map that can display all of your personal logged dives.

→ Dive Sites

Would be nice to group data into dive sites and be able to explore observations on a dive site.

Plan for TB2

→ Testing

Create a deployable version of the app and backend and deliver to client for testing.

→ App

Focus some time on cleaning up the UI/UX of the app.

→ Web

Begin implementing the website and building endpoints to get data for website.

Thanks for listening.

Any Questions?
