

VR-VOICE-COACHING

HENRY COURT, JACOB STEPHENSON, KEIRAN DUNNING,
MAX BODFISH

OUR PREVIOUS PROJECT...

OVERVIEW

- Our previous SEP was a VR voice coaching application meant to help users train their voice to sing.
- Users would choose an environment to practice within, then are greeted by a metahuman character.
- This character would assist the user by recommending lessons to engage with to better improve their skills, and give them tips and statistics to improve.
- Then, the user would select a lesson/song to practice within, with the application making use of the microphone capabilities of the headset to record the user's voice and use data such as pitch to calculate accuracy and quality accordingly.

OUR PREVIOUS PROJECT...

TECH STACK

- Our primary development tool was Unreal Engine 5, a game engine developed by Epic games, which was chosen as per the request of the client.
- We also made use of the Unreal Marketplace, a digital marketplace hosting assets that are readily usable in unreal projects, such as the MetaHumans Plugin the client had as use.

- For our version control system we stuck with Git and GitHub, although had we continued the project we possibly would have used extra tools such as Git LFS to store some of the larger files needed for unreal engine projects.
- For team communication and coordination, we primarily used Microsoft Teams.
- We managed task assignment and roadmap planning using Github issues and a Kanban board containing these issues as recommended in the SEP workbooks.

OUR PREVIOUS PROJECT...

DEVELOPMENT

- At the point of the VR voice coaching project's termination, we had developed:
- A detailed environment using an asset pack from the Unreal Marketplace that is able to be viewed and experienced in VR.
- We had implemented a MetaHuman using the respective plugin, and were working on making it capable of speech.
- We were working on implementing microphone input during the period where our project terminated.

Downfalls

What Went Wrong?

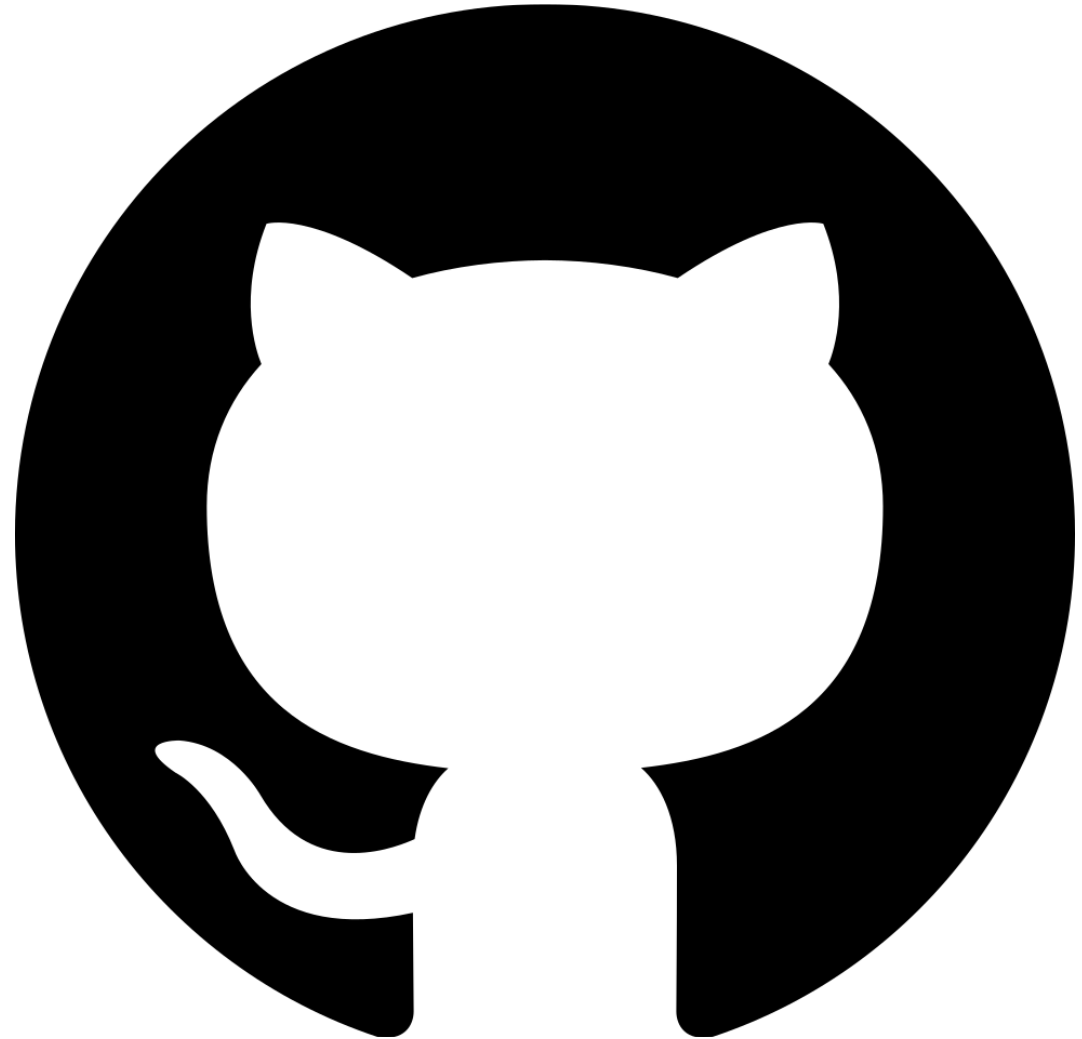

Technology

- Huge scope
- Laptops!
- Lack of support in labs
- A lot to learn

GitHub

- Lazy PR reviews
- Vague / broad issues
- Cluttered In Progress section
- Stale branches

Communication

- Unproductive meetings
- Four individuals, not one team
- Meeting lateness / absence
- Microsoft Teams posts with no / late replies

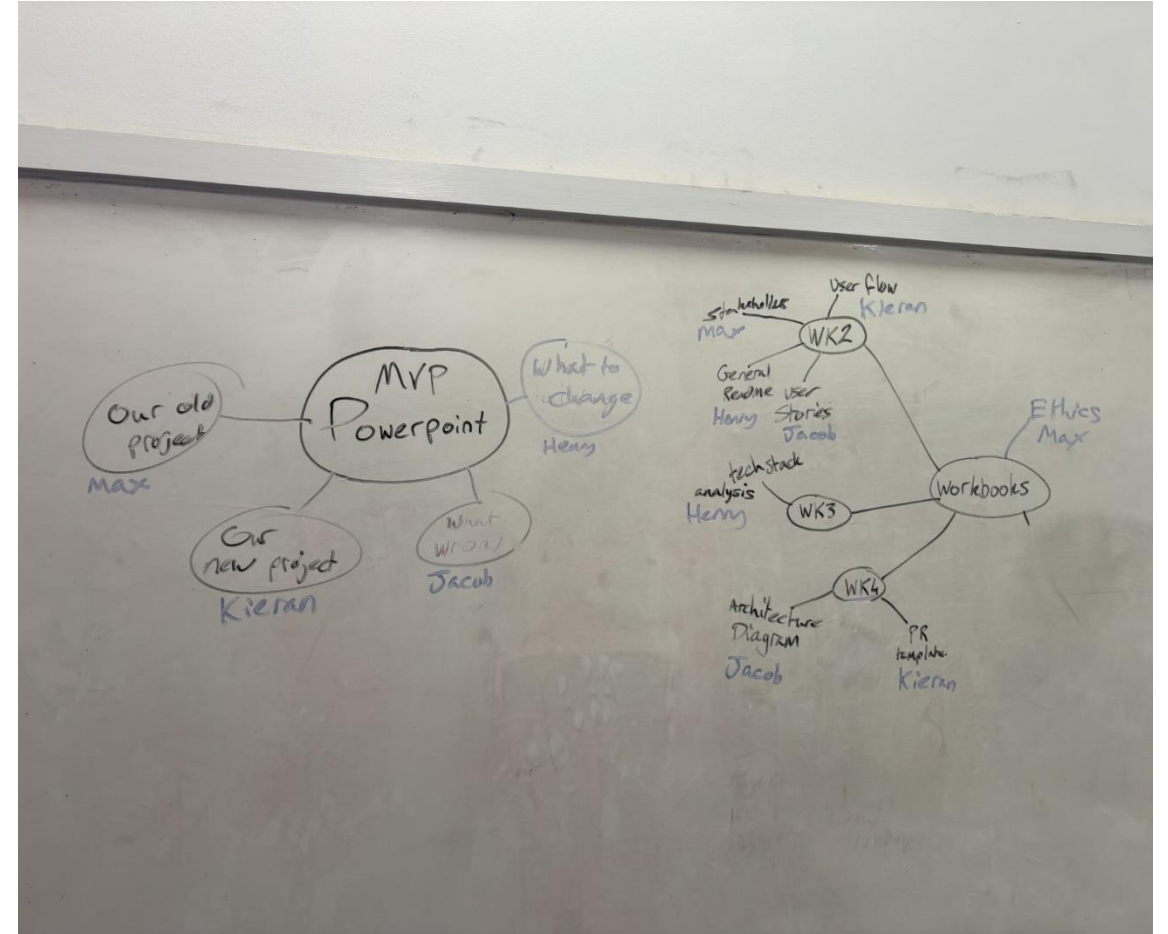

G O I N G F O R W A R D

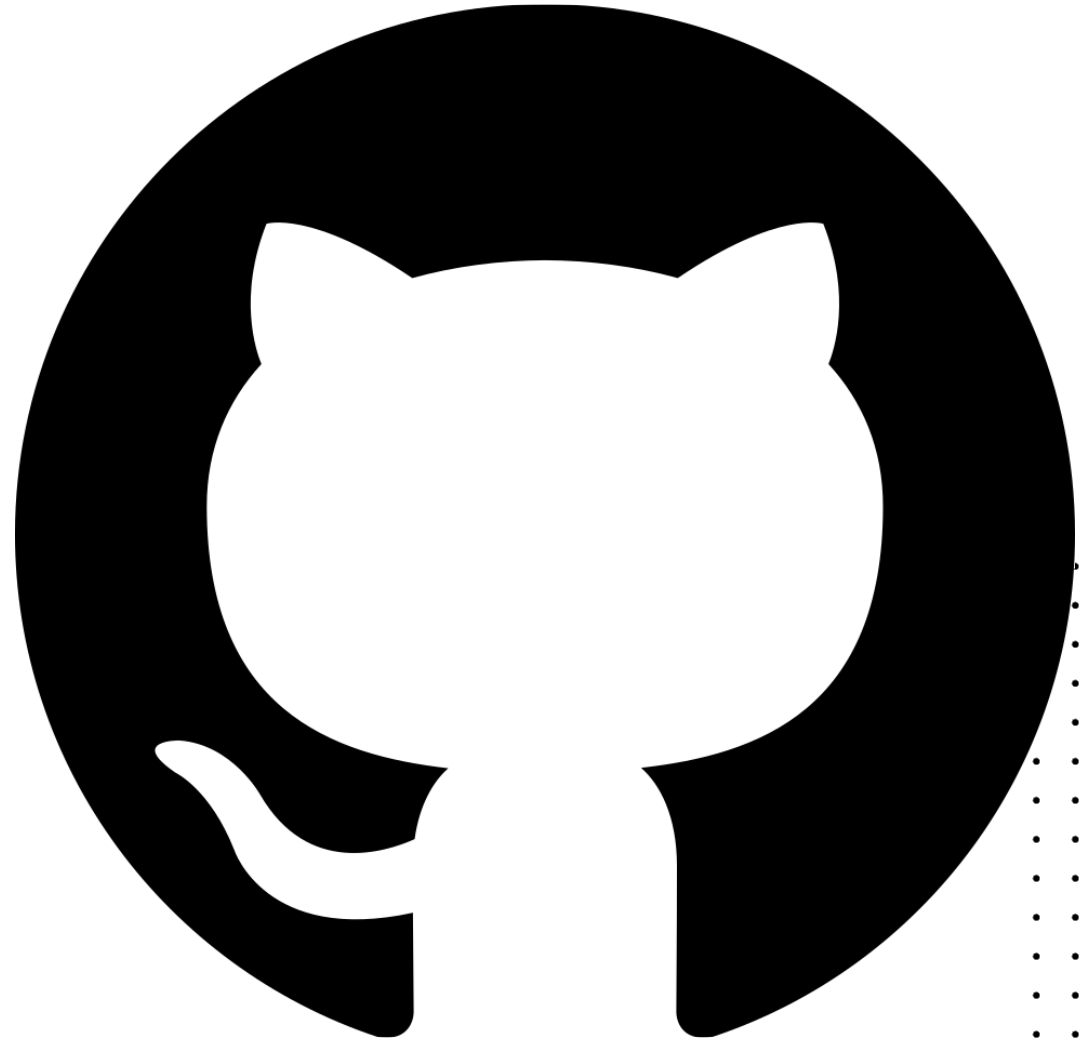

COMMUNICATION

- Rotating fortnightly project manager.
- Plan exact agenda for weekly Wednesday meeting (PM's job)
- Assign each team member weekly issues
- Moved to discord for convenience

G I T H U B

- Smaller, almost trivially sized commits
- Issues will remain in backlog/ready columns until we begin to work on them
- PR template will continue to expand as the new project's requirements are established in more detail

OUR NEW PROJECT

PROJECT OVERVIEW

- To create a website for the ILO team to manage and search a database with industry connections in different sectors and view their engagement with different schemes

ILO CRM

Welcome

Engagement Management

User Management

PREVIOUS GROUP'S WORK

- Tech Stack:
 - Backend: Laravel 11, MySQL 8.0+
 - Frontend: Vue 3, Axios
 - Server: AWS EC2, GitHub Actions (for deployment automation)
- Features:
 - Manage organizational and contact information
 - Supports dynamic generation of data for multiple academic years
 - Includes a user authentication system with login, registration, and permission management
 - Provides data tables for viewing and editing, including academic year information (e.g., Mentoring, Year in Industry)
 - RESTful API endpoints for frontend-backend interaction

OUR GOALS

- Requirements:
 - Ability to sort and filter data within the system
 - Delete multiple things within the system at once
 - Password reset links
 - Requirement for strong passwords
 - Only allow to put in password so many times before locking out etc.
 - System to highlight if a record hasn't been updated for 3+ years (GDPR)
- Stretch Goals:
 - A data visualization section, which shows graphs, tables etc. on companies, engagement type, how engaged people are, sectors, programmes etc.
