LATEST DESIGN

USER TESTING

Text isn't central, when returning from a site I would like to go back to where I was on site page, little icons on page instead of scrolling down through massive list, more photos per site? Rating system on comments board, upvote comments, reply to comments, summarise text describing the sites (put into bullet points? Capital N for number

The site pages could be better populated. They seem very empty. The positioning of the text could be changes as it currently looks odd.

Lots of white, comments board looks boring(too white), sites page could have link straight through to comments to write about the site, add roads to map? The map doesn't say much by itself, needs some more detail maybe distances between sites

Moderator for comments? Compass on map, grids on map, hard to tell how far apart sites are, 'about us' charity page, put their socials on there so we can donate, port lockroy is the only site with compass directions, text isn't central for sites, click on dots on map to name the location, or take you to the site.

AGILE WORKFLOW

CHALLENGES

1. Non technical client with a vague brief
2. Two members joining late
3. 6 team members - difficulty in distributing workload

FUTURE PLANS

- Maps change
- Frontend looks
- Backend / Database
- Comments

ROADMAP

- Weather API
- Database
- Offline usage
- More user testing

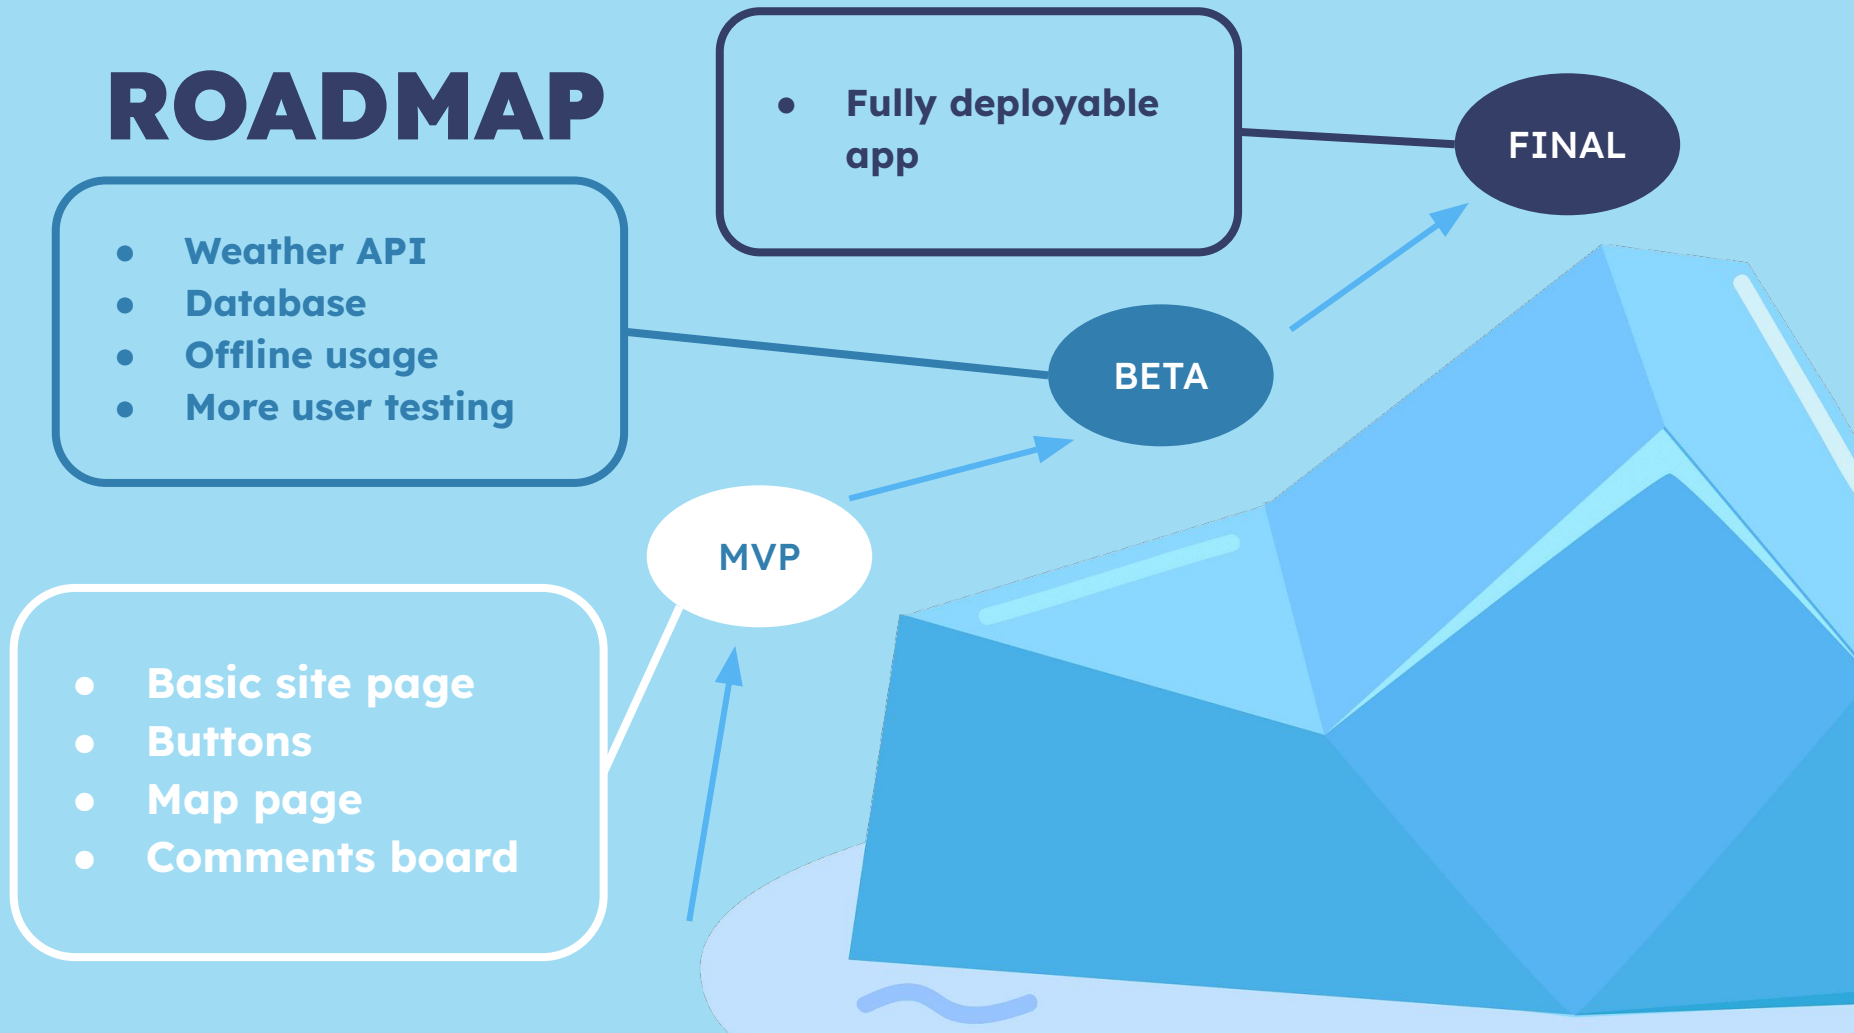

- Fully deployable app

- Basic site page
- Buttons
- Map page
- Comments board
